- ✓ 22 different colours
- ✓ As strong as the roof itself

affordable & effective

- ✓ Pricing comparative to most inferior products on the market
- ✓ Proven to achieve market leading results.

market leading quality

FS 567427

The only gutter guard in Australia manufactured under an independently certified quality management system. When you want to be sure you're receiving quality, look no further than this symbol.

You probably know the general benefits of a gutter guard, but the big differences to consider are:

How long will it last?

As long as the roof itself. Unlike most products, it won't break or tear in the years to come.

How good does it look on your home?

Made from Colorbond® expanded steel mesh in 22 different colours, it will look just like part of your roof and gutters, not like an ugly add on.

How much does it cost?

This is the best part. Despite being the highest quality product it actually costs no more than most of the inferior products that you usually find on the market.

Some of the many other benefits include:

Protecting your home from bushfires

If your gutters are filled with leaves, they're a serious fire risk in the dry seasons. Gutter Protection Systems received the best flammability index ratings in the industry. This means that even in a fire they won't melt.

Flammability Index Ratings (AS1530 Pt3)

Ignitability scale 0-20	Rating 0
Spread of flame scale 0-10	Rating 0
Heat evolved scale 0-10	Rating 0
Smoke evolved scale 0-10	Rating 0-1

In high to medium fire danger areas, councils require the flammability index rating for gutter protection products to be under rating 5.

AS-3959 compliant

The ripple effect

When rainwater flows from your roof to your gutters, the invisible skin which allows water to flow as a mass is split by the steel mesh, dropping the water into your gutter. Meanwhile the direction of the mesh allows unwanted leaves and debris to slide freely across.

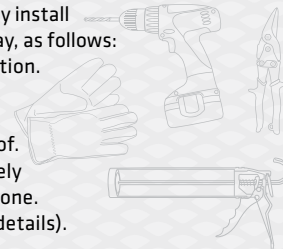

Stylish design with no gaps: our patented 3D pre-moulded products fit perfectly to your roof

Specifically designed to fit directly onto corrugated, tiled & trimdek roofing, Gutter Protection Systems fits perfectly in place as a stylish extension of your roofline.

Installation Process (no tampering with your roof)

Your local distributor can professionally install gutter guards to most homes in one day, as follows:

- 1: Gutters are cleaned prior to installation.
- 2: Unlike many, we don't lift tiles or corrugated sheeting which could compromise the integrity of your roof.
- 3: Mesh pieces are laid in place, securely fixed with C3 micro screws and silicone.
- 4: Warranty (refer to our website for details).

DIY kits available

Supplied with clear instructions, all materials and an assistance info line.
